

INSTRUCTIONS

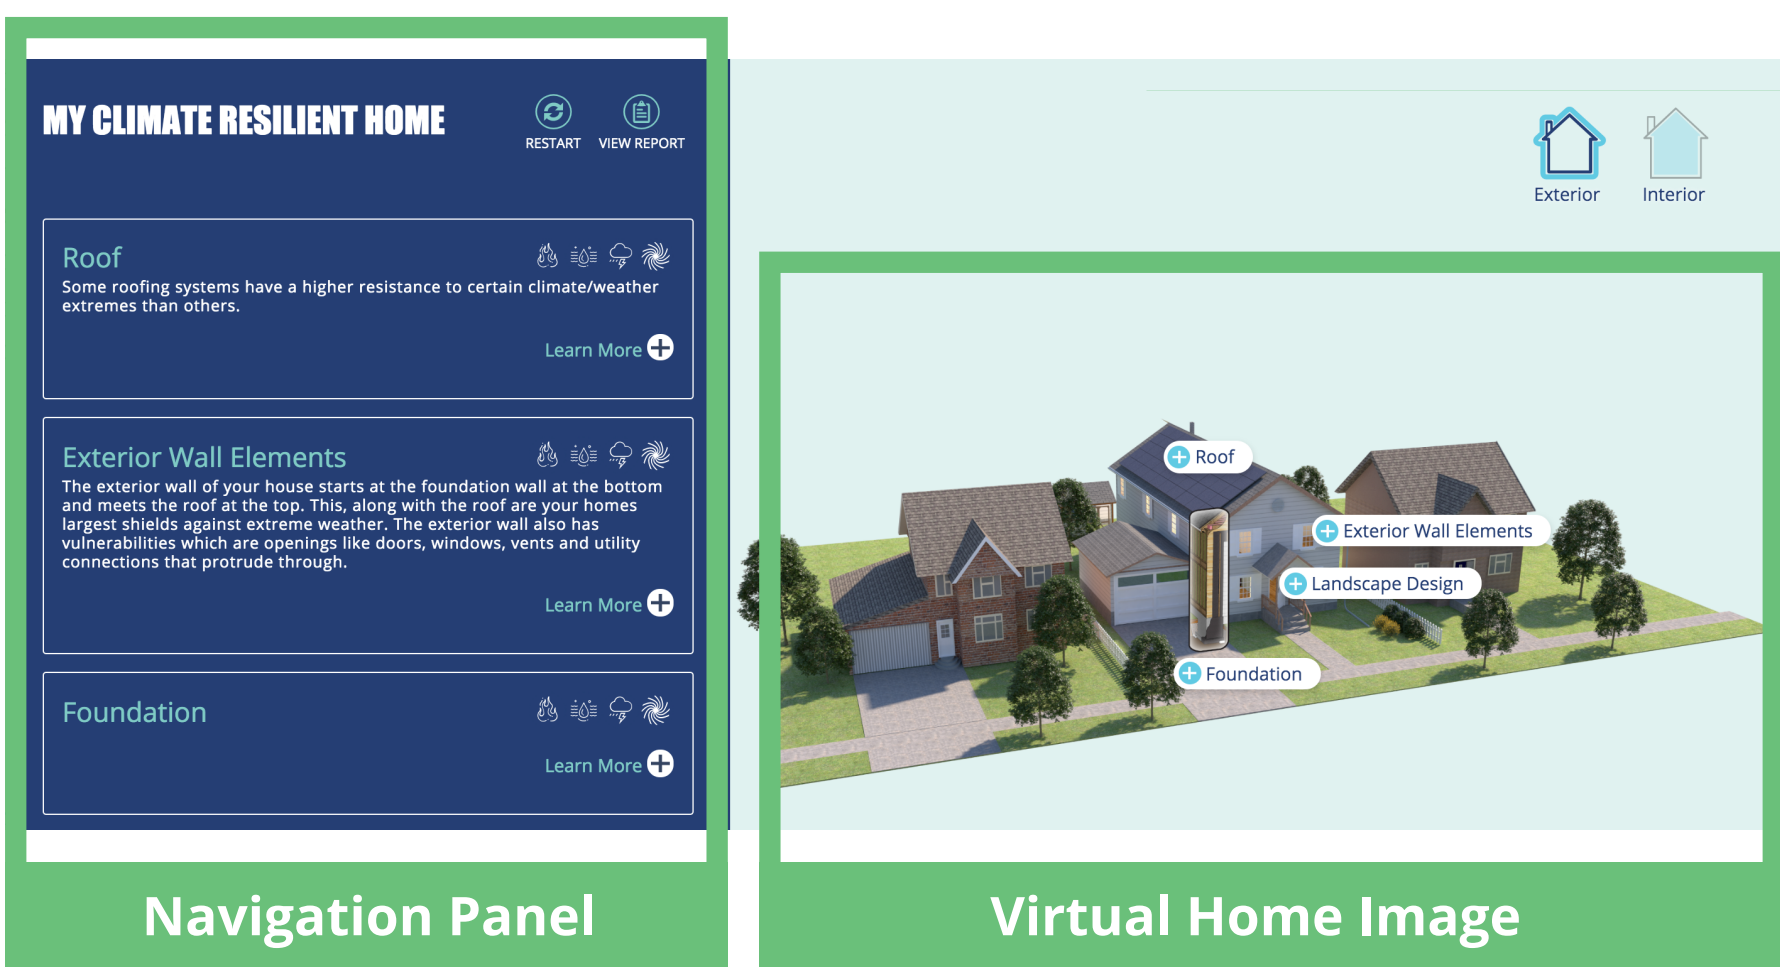

- 1

To get started, choose the **type of development**, **type of home**, and the **climate impacts** of interest.

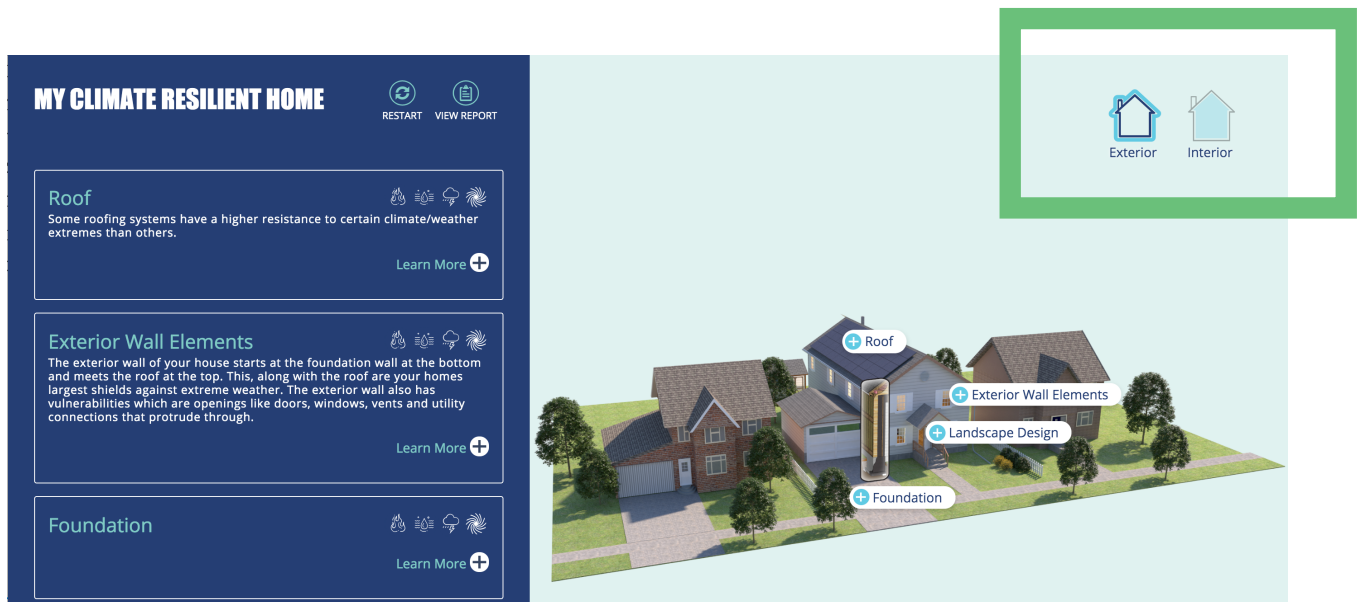

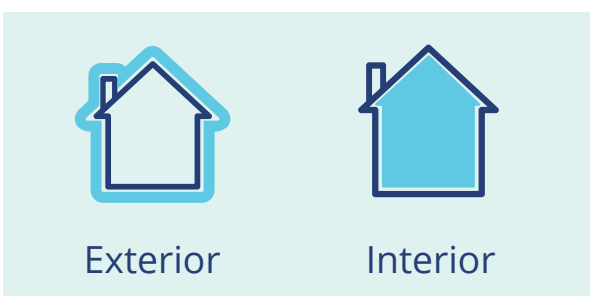

- 2

Once in the home you can explore climate resilient features, either using the **image**, or the **navigation panel** on the left.

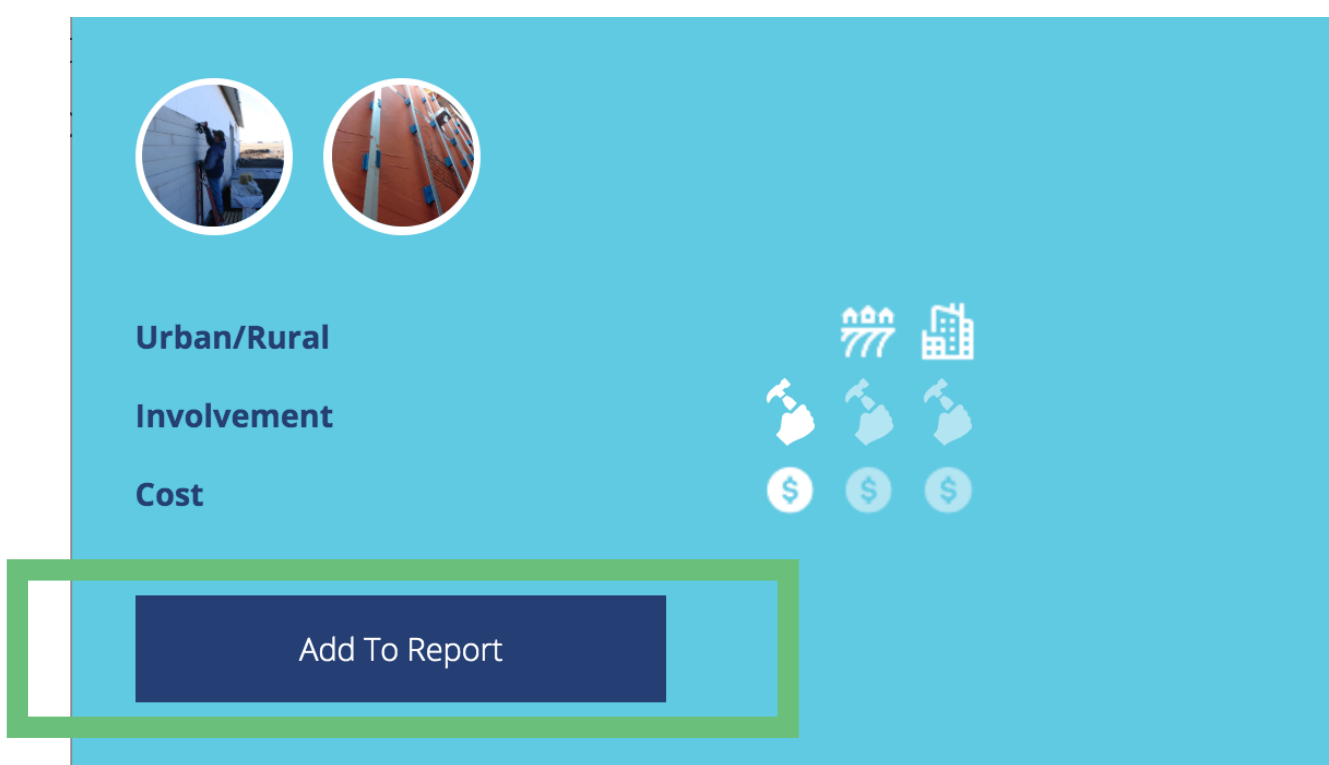

- 3

You can toggle between the interior and exterior feature of the home using the following buttons located on the top right corner of the image:

- 4

You have the option to select the climate features you are interested in, and add them to your home report by click on **Add to Report**. The report will provide you with a summary of all chosen features to make your home more resilient.

- 5

The following is a definition of the **involvement scale**:

- 

Can be completed by anyone with basic home maintenance skills
- 

Should be completed by someone with extensive DIY skills
- 

Should be completed by a professional

- 5

The following is a definition of the **cost scale**:

- 

\$0 - \$500
- 

\$500 - \$1000
- 

\$1000 +

- 6

The buttons in the navigation panel will also allow you to access your personalized home by click on **Report**. Alternatively you can start again by click on **Restart**.
